

Augmented Reality

by AR Inc.

Grigory Kuzmin
Eugene Smirnov

PML 30

Concept

Algorithm we using is based on tracking feature points and their further movement.

It has 2 base stages:

- In Lock In Stage it tries to find most stable feature points
- In Tracking Stage it will track movement of feature points, to calculate object position in screen.

feature points tracked in
lock-in stage

Example

Current Result

AR Model Viewer

current model:
ussr.obj

START

0.1 PRE-ALPHA

?

Aruco marker #322

Lessons learnt

As expected our team learned how to make programs in groups via Github. Now we can do android applications.

Something new:

- OpenCV
- ARuco
- OpenGL ES 2.0

Thanks For Your Attention
